Featured Success Story

Advanced analytics provides clarity across warehouse operations

Client: A global organization with multiple regional and local distribution centers

Challenges

No visibility

into warehouse operations involving a complex distribution network of global distribution centers

No capabilities

for capacity building, operational management, workforce capacity, performance, and productivity in warehouse operations

Solutions

Customized
solutions that use descriptive and predictive analytics to implement zoning and slotting optimization
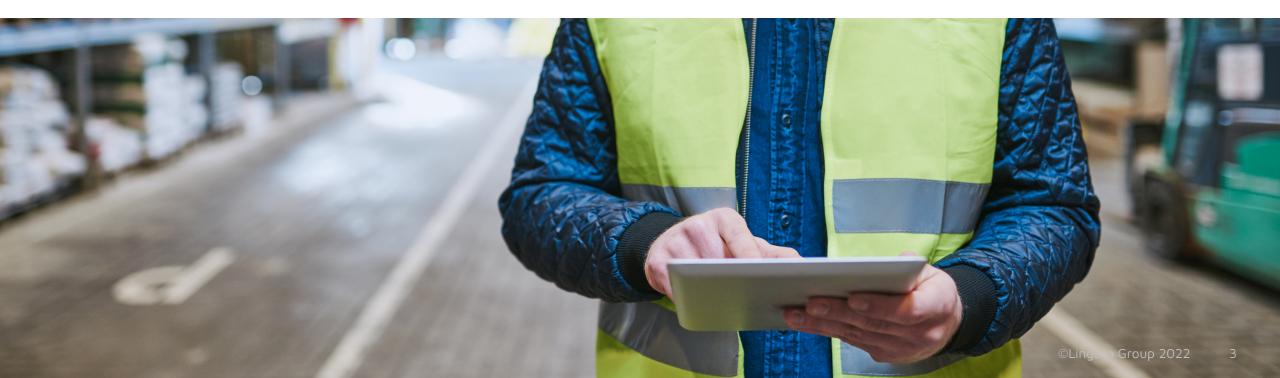

Optimized
operations by helping to manage the workforce and assets through metrics like work category and shift schedule

Automated
the calculation and comparison of the efficiency of the distribution centers using key metrics such as cross docking, picking, and shipment preparation

Aggregated
vast amounts of data points in seconds and analyzing them using metrics such as receiving, putaway, storage, picking, and distribution
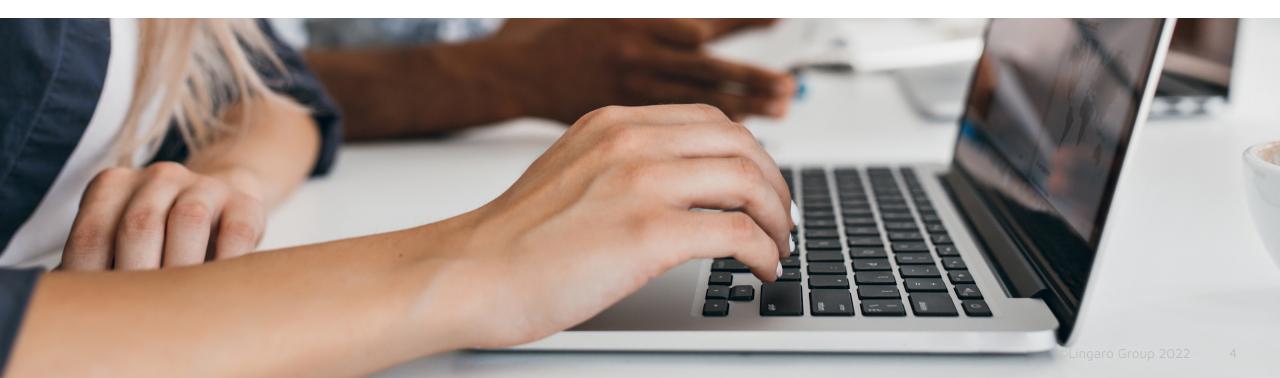

Value Delivered

5%
pallet movement distance reduced, which decreased operational costs

Renewed
capability to analyze pallet life cycles

Near-real-time
information and actionable insights enabled for reacting faster against disruptions

All things data
